

DisplayRide Launches Repo-SafetyCam™ to Ensure Safety & Compliance During Vehicle Repossessions

First solution in the market that addresses a serious & growing problem effectively and economically.

Milpitas, CA, September 12th 2023 - DisplayRide, a leader in innovative mobility solutions, unveiled the Repo-SafetyCam™, a game-changing Repossession Monitoring Platform that is designed to transform vehicle repossessions, making them safer, ensuring compliance, reducing liability while keeping the engagement professional, efficient, and economically viable.

The Repo-SafetyCam™ is first of its kind, integrating an industrial-strength, touch-sensitive bodycam with advanced capabilities. This powerful tool records high-quality video and audio, livestreams content, and automatically uploads it wirelessly to a secure cloud location after encrypting it. Thus, a neutral record of the entire engagement during the repossession process is made, and a copy sent to the Repossession Agency. The Repo-SafetyCam™ also documents the property removal process to prevent any false allegations.

The livestreaming directly connects the bodycam feed to the Agency's back-office/command center, enabling swift intervention and de-escalation in potentially threatening situations. An SOS button is available to generate an urgent alert to the Agency while also acting as a deterrent to any confrontation.

The Repo-SafetyCam™ ensures compliance by the Agent during the entire engagement and reduces liability for the Agency.

"Recent statistics highlight the dangers associated with repossessions. With the Repo-SafetyCam™, we are committed to making this process safe, professional and efficient, economically," emphasized Abdul Kasim, CEO of DisplayRide Inc. "Our solution is easy to integrate into an Agency's operations and empower them to monitor repossessions across their entire vehicle fleet in real-time through a secure web portal" he added.

For more information on the Repo-SafetyCam™, please contact info@displayride.com or call 408.290.1936.
